

The Brabender Winder is a complete new Brabender solution which was not so far scope of our supply.

It completes our processing solutions and auxiliary equipment.

It supports you regarding:

- The simulation of your production
- The quality control of your raw materials
- The development of your recipes

Benefits

Brabender®

... where quality is measured.

Brabender® Winder

Take-up and winding system for winding round rods and flexible tubes

Application

What does it do?

The Brabender Winder winds round rods or flexible tubes on bobbins.

Why is this important?

- It completes an extrusion process of round rods or flexible tubes
- It generates samples for further testing or for product prototyping
- It supports production and development control

Case study

Case 1 - Initial situation:

Customer develops new materials for 3D printing.

He would like to know the processibility and swell behaviour.

Return:

He gets samples which can be compared with existing solutions.

He can generate samples for end product testing and presentation to his own customers.

The extruded samples can be used for marketing purposes.

Case study

Case 2 - Initial situation:

Customer develops new materials for flexible TPU tubes.

He would like to know the processibility and swell behaviour.

Return:

He gets samples which can be compared with existing solutions.

He can generate samples for end product testing and presentation to his own customers.

The extruded samples can be used for marketing purposes.
